This cDNA encodes an altered form of the Arabidopsis thaliana non-
inducible immunity-1 (NIM1) protein. Sequences shown in AAV43661 to
AAV4365 represent variants of the NIM1 cDNA. The invention provides a
chimeric gene comprising a promoter active in plants operatively linked
coll stably transformed with a recombinant vector comprising such a
cells stably transformed with a recombinant vector comprising such a
cells stably transformed with a recombinant vector comprising such a
collineric gene have a broad spectrum of disease resistance. The altered
collineric gene have a broad spectrum of disease resistance. The altered
collineric gene have a broad spectrum of disease resistance (SAR) signal transduction pathway. The transgenic
colliner transformed with an altered NIM1 gene exhibits constitutive SAR
expression which is higher in the transformed plants than in a wild-type
colliner. The products can be used for producing plants with a broad
spectrum disease resistance. Overexpression of NIM1 minics the effects
of inducer compounds that induce constitutive immunity (CIM) phenotype
colliners. The inventions can be used with plants such as rice, wheat,
barley, rye, corn, potato, carrot, sweet potato, sugar beet, bean, pea,
chicory, lettuce, cabbage, cauliflower, broccoli, turnip, radish,
cherry, peach, nectarine, agailic, eggplant, pepper, calery, carrot,
squash, pumpkin, zucchini, cucumber, apple, pear, quince, melon, plum,
cherry, peach, nectarine, apricot, strawberry, grape, raspberry,
conato, sordum and sugarcene. The plants produced are resistant to
a plant pathogens such as virrodes, viroles, fungi, bacteria, insects such,
a suhids and lonidanters and company fungi, bacteria, insects such
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 ant pathogens such as viruses, viroids, fungi, bacteria, insects such aphids and lepidoptera and nematodes. The plants produced can be used

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Sequence 12, Al

Listing first 45 summaries

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

```

```
//note—Vector: Bluescript SK(-); Site 1: EcoRI; Site_2:
XhoI; Suspension cultures of L.esculentum E6203 were grown
in Murashige and Skoog based medium, supplemented with 15%
coconut milk (filter sterilized and added after
autoclaving), 2% saccharose, and Img/ml 2,4D (pH5.8).
Fresh medium was added every 7 days, and cultures were
strown at 25 C, with 12hrs of light and continuous
shaking."

The seedlings were innoculated with Bradyrhizobium
japonicus, strain USDAILO priot to harvest. Stratagene's
CDNA synthesis Kit (catalog number 200401) was used to
synthesize the CDNA. First-strand synthesis was performed
with Smethyl dCTP, hence the ligated CDNA was
hemimethylated. A modification of Stratagene's
first-strand synthesis primer was used. An 'anchor'
nucleotide (VaA.C, or G) was added to the 3' end of the
primer [GAGAGAGAGAGAGAGAACATGTCTCGAG[T]]89] to anchor
the primer [GAGAGAGAGAGAGAGAACATGTTCTCGAG[T]]89] to anchor
the primer at the 5' end of the poly(A) tract. After
second strand synthesis, the CDNA ends were filled in with
cloned Pfu DNA polymerase, ligated to EcoRI adapters and
subsequently phosphorylated. The XhoI site within the
first-strand synthesis primer was then restricted by
digestion with XhoI; all XhoI sites in the CDNA would be
protected by their hemimethylated status. The CDNA
constructs were size-fractionated with a 500bp cutoff,
using GibcoBRL Life Technologies' CDNA Size Fractionation
Stratagene's palluescript II XR Predigested vector
(pBluescript II SK(+) that has been digested with EcoRI
and XhoI, and phosporylated by Stratagene). Both the
white and blue colonies appear to contain recombinant
plasmids with CDNA inserts, based on size (n=25). This
library was constructed by Dr. Paul Keim and Dr. Virginia
